- **Programming Languages:** C++, Python, javascript
- **Frameworks & Libraries:** React.js, Node.js, Bootstrap
- **Technologies:** HTML, CSS, SQL, DBMS, Cloud Computing (AWS, Azure, Firebase)
- **Tools:** Windows, GIT, GitHub Visual Studio Code, MS SQL Server

Projects:-

Grocery Mangement System

Technologies: C++, OOP

| (july- 2023)

- Designed and implemented a Grocery management system to streamline inventory management, item tracking, and sales processing. Applied object-oriented programming principles to create a user-friendly, efficient interface for managing product data and transactions.

E-commerce Database

Technologies: SQL

| january- 2023)

- During my time at university, I contributed to a noteworthy project involving the creation of an e-commerce database. This project aimed to develop a robust and efficient system for managing online sales, inventory, and customer relationships.

Barbershop Website

Technologies: React.js, JavaScript, Bootstrap, HTML, CSS

| (August - 2024)

- Created a website for a barbershop that allows customers to view barber profiles, rate services, and schedule appointments.
