OBJECTIVE

To gain hands-on experience, enhance my technical expertise, and strengthen problem-solving skills in a professional environment.

EDUCATION

Bachelor's in computer sciences

Lahore Garrison University

Fall 2022 - Fall 2026

- **Major:** Computer Sciences
- **Minor:** Computer Programming and Software Engineering
- **Related coursework:** Communication, Business ethics, Workflow management, Operating Systems, Database design and administration, System design and diagramming, Data structures and algorithms and extreme programming.
- **Interests:** Python development, Machine learning, Backend development, System design, Cloud computing, Dev-ops, and Web development

PAST PROJECTS AND EXPERIENCES

Web Application with Headless CMS Integration

- Designed and developed a responsive web application using Flask, HTML, CSS, and Bootstrap, integrating Strapi as a headless CMS for content management.
- Implemented features such as user authentication, dynamic content fetching, and CRUD operations, ensuring seamless functionality and database synchronization with SQLite3.

Social Media Database System with Transact-SQL

- Designed and implemented a database backend for a social media platform using MSSQL and Python. Created schemas for user management, content management, and engagement tracking, including tables for users, posts, comments, likes, hashtags, and more.
- Developed Python-based interfaces for database administration tasks, including table creation, CRUD operations, and data export to CSV. Created and executed complex SQL queries to analyze user activity, hashtag trends, and engagement metrics, enabling data-driven insights and platform optimization.

Web Scraping Project

- Developed two web scrapers for extracting product information, utilizing BeautifulSoup for static HTML parsing and Selenium WebDriver for dynamic JavaScript-rendered content. Designed scripts to scrape product names, sale prices, and regular prices, storing the data in CSV format for analysis.
- Implemented robust error-handling mechanisms and logging for efficient troubleshooting. Automated browser interactions using Selenium with WebDriverWait to ensure content loading, enabling reliable extraction of data from dynamic websites.

Encrypted Credential Storage System

- Developed a password management system using Python and Fernet (AES encryption) to securely store, encrypt, and retrieve passwords with robust key management.
- Implemented a command-line interface (CLI) for seamless user interaction, enabling efficient creation, loading, and management of encrypted password files.

Note: The above-listed projects are some of my most significant and highlighted works. For a complete list of my projects and repos, please visit my [GitHub profile](#)

EXPERIENCE

Python Intern

HiSky Tech, Sargodha (remote)

Jul 2024 – Aug 2024

- Contributed to project development using Python during a remote internship at HiSky Tech; gained hands-on experience with tools like Trello, Jira, Miro, Google Workspace, Slack, and basic design skills in Canva and Figma for collaboration and visualization.
- Technical Contributions:** Developed and implemented Python scripts for data cleanup and data scraping, participated in code reviews, and ensured adherence to best practices under senior developer supervision.

Web Administrator | Social Media Analyst

Accountancy Hub Online Platform (Hybrid)

Sep 2022 - Current

- Managed and optimized digital platforms, leveraging analytical tools to enhance social media engagement and website functionality; gained hands-on experience in website administration, workflow optimization, and data-driven decision-making.
- Customer Support and Technical Assistance:** Provided technical guidance to clients on enrollment and support platforms; utilized cloud-based tools for remote collaboration and contributed to improving user experience through detailed feedback and problem resolution.

SKILL SET AND EXPERTISE

Hard Skills

Programming & Frameworks:

- Python (Flask, Django, Pandas, NumPy, Selenium)
- C/C++ for data structures and algorithms.

Web Development:

- Backend development with Flask and headless CMS integration using Strapi.
- Web scraping with BeautifulSoup and Selenium, and API integration for dynamic apps.
- Front-end development with HTML, CSS, Bootstrap, and Bulma for responsive UI.

Database Management:

- Database design, advanced SQL queries (joins, CRUD), and role-based security implementation.
- SQL (MySQL, MSSQL, SQLite3, T-SQL) for advanced database management.

Agile Methodologies & Tools:

- Proficient with Jira, Trello, and Miro for team collaboration and project management.

MS Office & Productivity Tools:

- Proficient in Microsoft Office Suite (Excel, Word, PowerPoint) and Google Workspace tools (Docs, Sheets, Slides, Drive) for data analysis, reporting, and team collaboration.

Soft Skills

Problem-Solving:

- Analytical thinker with a proven ability to troubleshoot technical challenges and optimize solutions.

Quick Learner:

- Eager to learn and adapt to new tools, techniques, and technologies.

Communication:

- Strong written and verbal skills, enabling effective collaboration with cross-functional teams.

Teamwork & Collaboration:

- Adept at working in Agile teams, fostering a cooperative environment to achieve project goals.

Adaptability:

- Quickly adapts to new technologies and work environments, ensuring smooth transitions and productivity.

Work Ethic & Leadership:

- Demonstrates reliability, and initiative in completing tasks and guiding projects.

BENEFITS OF MAKING CV CLOUD BASED

A cloud-based CV is a resume that is saved online instead of being just a file on your computer. Here are the simple benefits of using a cloud-based CV:

- **COST SAVING:**
Rather than purchasing and owning costly hardware and software, you only pay for the resources you consume. This "pay-as-you-go" approach can save a lot of money.
- **SCALABILITY:**
Cloud services are simple to scale up or down as your needs change. If your business expands, you can easily add more resources. If demand drops, you can scale back and save.
- **FLEXIBILITY:**
Cloud computing enables you to access your applications and data anywhere that has an internet connection. This offers more flexibility to work remotely and collaborate.
- **IMPROVED EFFICIENCY:**
Cloud providers perform maintenance and software updates on the hardware and software, making it possible for your IT staff to work on other matters of importance.
- **RELIABILITY:**
Cloud providers usually have more than one data center, which means your data is duplicated and can be accessed even if a single data center is down.
- **SECURITY:**
Trusted cloud providers spend a lot of money on security to keep your data safe. They may have better security than small businesses can provide.
- **COLLABORATION:**
Cloud based services make it very convenient for many individuals to work on the same documents and projects simultaneously.
